## 工作论文

### 博弈论模型与计量经济学

7. Li, Huihui and Nianqing Liu. “[Nonparametric Identification and Estimation of Double Auctions with Bargaining](#).” (Revise and resubmit to *Econometric Theory*)

摘要: This paper studies the nonparametric identification and estimation of double auctions with one buyer and one seller. This model assumes that both bidders submit their own sealed bids, and the transaction price is determined by a weighted average between the submitted bids when the buyer’s offer is higher than the seller’s ask. It captures the bargaining process between two parties. Working within this double auction model, we first establish the nonparametric identification of both the buyer’s and the seller’s private value distributions in two bid data scenarios; from the case of all bids being available, to the case of only transacted bids being available. Specifically, both private value distributions are point identified when all of the bids are observed. They are, however, partially identified when only the transacted bids are available. A sharp characterization of the identified set is provided in the latter case. Second, we estimate double auctions with bargaining using a two-step procedure that incorporates both boundary and interior bias correction.

We then show that our value density estimators achieve the optimal uniform convergence rate of first-price auctions. Monte Carlo experiments show that, in finite samples, our estimation procedure works well on the whole support and significantly reduces the large bias of an estimator without bias correction in both boundary and interior regions.

8. Li, Huihui. “Nonparametric Identification of  $k$ -Double Auctions using Price Data.”

摘要: This paper studies the model identification problem of  $k$ -double auctions between one buyer and one seller when the transaction price, rather than the traders’ bids, can be observed. Given that only the price data is available, I explore an identification strategy that utilizes the double auctions with extreme pricing weight ( $k = 1$  or  $0$ ) and exclusive covariates that shift only one trader’s value distribution to identify both the buyer’s and the seller’s value distributions nonparametrically. First, as each exclusive covariate can take at least two values, the buyer’s and the seller’s value distributions are partially identified from the price distribution for  $k = 1$  or  $k = 0$ . The identified set is sharp and can be easily computed. I provide a set of sufficient conditions under which the traders’ value distributions are point identified. Second, when the exclusive covariates are continuous, it is shown that the buyer’s and the seller’s value distributions will be uniquely determined by a partial differential equation that only depends on the price distribution, provided that the value distributions are known for at least one value of the exclusive covariates.

9. Li, Huihui. “Uniform Consistency of a Boundary Corrected Kernel Density Estimator.”

摘要: Zhang, Karunamuni, and Jones (1999) proposed a method of boundary correction for kernel density estimation, which is later improved by Karunamuni and Zhang (2008). This method uses the reflection technique involving reflecting a transformation of the data. In this paper, I consider a generalization of Zhang, Karunamuni, and Jones’s estimator. The generalized estimator allows one to consistently estimate the density function, not only on a compact support, but also on arbitrary compact subinterval of the support on which the density is continuous but possibly has discontinuity at the endpoints. I establish the uniform consistency of the generalized estimator and show that it has a uniform convergence rate of  $O_p(h^2 + \sqrt{\log n/(nh)})$ , provided that the primary and the secondary bandwidths shrink at proper rates. The potential extension of the estimator in order to correct higher order bias is also discussed in the paper.

10. Çelen, Boğaçhan, Sen Geng, and Huihui Li. “Belief Error and Non-Bayesian Social Learning: Experimental Evidence.”

摘要: This paper experimentally studies whether individuals hold a first-order belief that others apply Bayes’ rule to incorporate private information into their beliefs, which is a fundamental assumption in many Bayesian and non-Bayesian social learning models. We design a novel experimental setting in which the first-order belief assumption implies that social information is equivalent to private information. Our main finding is that participants’ reported reservation prices of social information are significantly lower than those of private information, which provides evidence that casts doubt on the first-order belief assumption. We also build a novel belief error model in which participants form a random posterior belief with a Bayesian posterior belief kernel to explain the experimental findings. A structural estimation of the model suggests that participants’ sophisticated consideration of others’ belief error and their exaggeration of the error both contribute to the difference in reservation prices.

## 产业组织与量化市场营销

11. Li, Huihui and Kai Li. “Offline Size and Online Scale: A Tale of Two Platforms.” (Submitted)

摘要: The online market operates through one of two possible business models: the reseller or the marketplace. Our study is motivated by the fact that the relative scale of the reseller to the marketplace is typically larger in developed countries, such as the United States, than in developing countries, such as China. We propose a novel explanation for this online scale difference, linking it to an offline determinant: the firm size distribution. Specifically, revenue-sharing, which is commonly adopted by a marketplace to attract firms to sell through it, is more favorable to smaller firms than the retail pricing mechanism used by a reseller. Thus, the relative scale of the marketplace to the reseller tends to be larger in developing countries, where the offline firm size distribution is skewed towards smaller firms. Our study offers a tractable framework that explains how the online platform scale is related to the offline firm size distribution.

12. Li, Dajun, Nan Zhang, and Huihui Li. “Money versus Time: The Effects of Social Media Exclusion on Mental Construal and Donation Behaviors.” (Revise and resubmit to *Journal of Behavioral Decision Making*)

摘要: The advent of social media platforms has ushered in a new era, transforming the landscape of interpersonal interactions, with Facebook and Twitter largely replacing traditional modes of communication. However, this shift has brought forth challenges, such as cyberbullying and social exclusion. Existing research suggests that individuals who

experience social exclusion are more receptive to altruistic actions, which may help restore their sense of connection and well-being. This study delves into the realm of social media exclusion, distinguishing between rejection and ignoring, to investigate their influence on subsequent preferences for charitable donations, be it monetary or in the form of time. Across four sub-studies, the research demonstrates that those feeling socially rejected tend to favor monetary donations, while those experiencing social ignoring show a preference for donations of time. Furthermore, the study explores how aligning the type of exclusion with the abstractness of charitable appeals and the temporal distance of such appeals can impact donation preferences. The findings suggest that charitable organizations can enhance their outreach by tailoring appeals to individuals' mental construal levels, thereby aiding excluded individuals in reconnecting with their community and finding happiness post-exclusion.

13. Li, Dajun, Nan Zhang, and Huihui Li. "Confucian *Zhongyong* and Sustainable Behaviors: A Moderated Mediation Model Based on the Construal Level Theory." (Revise and resubmit to *Journal of Cross-Cultural Psychology*)

摘要: This study aims to understand whether and how Eastern culture-rooted *Zhongyong* thinking (often referred to as the golden mean) may affect individuals' sustainable behaviors. *Zhongyong* is a typical oriental Confucius thought that addresses interpersonal and environmental harmony. This study proposes a moderated mediating model to explore the underlying mechanism based on construal level theory and shed light on the moderating roles of *Mianzi* (reputation awareness) and public observability (public vs. private) in the topic of sustainability. A representative sample of 995 Chinese participants spanning across all provinces of China from a cross-sectional survey in this study, and the regression results showed that *Zhongyong* positively affected sustainable behavior through direct and indirect (e.g., construal level) paths. Notably, *Mianzi* exerts a significant moderating effect on both direct and indirect paths, while public observability predominantly influences the direct path. Our research findings could potentially inspire environmental organization managers to leverage this rich oriental cultural heritage for advancing sustainability objectives through online and offline green communication and campaigns.

## 公共卫生与卫生经济学

14. Zhu, Jiming, Haiyu Pang, Huihui Li, et al. "Female Urinary Incontinence in China after 15 Years' Efforts: Results from Large-scale Nationwide Surveys." (Submitted)

摘要: China has made great achievements in reducing maternal mortality, while improving their quality of life remains a long journey ahead. Urinary incontinence (UI), a disease that quietly but seriously affects women's health, is such a global burden but often neglected. The research is based on three nationwide investigations: a national cross-sectional survey in 2021, involving 54,346 women aged  $\geq 20$  years, using a complex multistage stratified sampling method; another nationwide cross-sectional survey in 2006; the data regarding the institutions and physicians providing pelvic floor rehabilitation services from 2005 to 2020. The weighted prevalence of female UI and its subtypes were estimated as primary outcomes. Knowledge, attitude and care-seeking behaviour of UI were evaluated. The weighted prevalence of female UI was 16.0%. The prevalence of all UI subtypes decreased from 2006 to 2021; SUI was still the predominant subtype in 2021, followed by MUI and UUI. The estimated absolute number of UI among Chinese women aged  $\geq 20$  years was 85.8 million in 2021; 48% of women with UI were aware that UI was a medical condition, but only 10.1% of them sought care. After 15 years' development, there were 8,400 pelvic floor rehabilitation institutions and nearly 10,000 relevant physicians—they were found to be associated with the UI prevalence.
